Large Network Server Requirements

The requirements below are based on a server running Caterease standalone, with no other applications. If you are installing this application on a server with existing applications, you will need to factor in the hardware requirements of those applications.
In many organizations, Caterease plays a critical role in day to day operations. If this is the case with your company, you may want to discuss hardware redundancy with your IT consultant. While it isn't a requirement, a simple RAID setup or contingency plan can save you time and money should a piece of physical equipment fail.

10-20 Simultaneous Users

Operating System	Windows Server 2008/2008 R2/2012/2012 R2 (Small Business Server editions **not** recommended)
Processor	Dual Core 1GHz or higher
RAM	2GB
Hard Disk	2GB Free, 7200RPM SATA or IDE Drive.
Screen Resolution	1024 x 768 or Higher
Networking	100Mbps Ethernet LAN. Internet access required for updates & software activation. Click here for more information.
Misc	Uninterruptible Power Supply (Battery Backup)

20+ Simultaneous Users

Operating System	Windows Server 2008/2008 R2/2012/2012 R2 (Small Business Server editions **not** recommended)
Processor	Xeon Dual Core or Higher
RAM	4GB of RAM
Hard Disk	2GB Free, 10K RPM SAS OR SCSI Drives running in RAID
Screen Resolution	1024 x 768 or Higher
Networking	1Gbps Ethernet LAN. Internet access required for updates & software activation. Click here for more information.
Misc	Uninterruptible Power Supply (Battery Backup)
